Live Opportunities for You

OPPORTUNITY knocks but once." So said the sage. But don't you believe it. It isn't so.

Opportunity knocks every day of your life. Every advertisement in this paper is brimful of opportunity for some one. Many of them are written with you in mind. They offer you opportunities to save time, money and effort-opportunities to surround yourself with comforts and conveniences-opportunities to eat better, sleep better, dress better and live better

You would live in ignorance of these opportunities were if not for advertising. Somebody might be selling a new, better and more economical food; or a utensil that would add immeasurably to your comfort and well-being; or some better material for making shoes or clothing-but you would never know it.

Modern advertising is a boon.' It keeps information up to date on the many things we need in order to live profitable, happy and useful lives in this age of rapid-fire progress.

Every advertisement in this paper is a real opportunit

SECOND SECTION

The Morning Bulletin

Published every legal morning by The Buildins. Publishing Company, Limited, at The Buildins. 8841-9865 Jamper Avenue East, Edmonton, Alberta.

worst. The processes of civilization must go for. Sutheriand, assistant city engineer, Edmonton. ward, whether the seasons are wet or dry. It is therefore the business of organized society to provide that there shall be roads in condition to permitted that there shall be roads in condition to permit of free intercommunication under any and all some one cless than the assistant city engineer of weather conditions. The prairie clay which makes [Edmonton might very well have been selected to ward, whether the seasons are wet or dry. It is rherefore the business of organized society to pro-vide that there shall be roads in condition to per-mit of free intercommunication under any and all some kind other than the native clay, or the black the condematory assertion is that as assistant carth, must be found; and such material simply does not exist (unless perhaps in negligible exmount) in any part of the great plains. The statement of alleged fact, and therefore if and Rocky Mountains to the West and the Laurentian when he made it he did it under absolute convictorables. intes to the East, of course could supply hard derial to cover all the reads in the West; but gave point to the condemnatory statement inco cost of preparing the material and the long porated in the title. haul to prairie points of use is recognized as being

practically prohibitive, at the present time.

It is a peculiar feature of the paving question in the prairie west that gravel laid on the native clay will not make a permanent road. Jasper av-enue, Edmonton, was covered with gravel repeat-edly. The only result was that in a season or two of traffic the gravel had practically disappeared in the underlying clay, and the roadway was as though it had never been gravelled. When Stratheona was a separate town Whyte avenue was gravelled to a depth of six inches with clean washed gravel from the river bars. The gravel had passed through the washing apparatus of a powerful gold dredge. Within three seasons that gravel had disappeared so completely that the street was as though gravel had never been

The experience of forty years has demonstrated isture to penetrate to the clay below. If the sur orting clay is kept dry by adequate drainage a by an impervious surface there is no difficulty in making and keeping good roads. The only dif-ficulty in providing these conditions is that of cost Naturally where cities are as widely scattered as in Alberta, and where country roads are meas-used by the thousand miles, the question of cost is all-important. Material must be cheap and be capable of being cheaply applied, or for the coun try at large it does not exist—that is to say it cannot be used and therefore might as well not

cxist.

The problem of road building is as old as civilization. The substance known as bitumen or asphalt has been used in road-making at least aimse the time of the Assyrians. Being of a liquid, or semil-quid, character it has the advantage of the same of readily combining with solid substances such as send or crushed gravel to form a solid mass with a substances and as the same of the

asphaltum base fuel oils of Southern California have in the process of refining produced vast quantities of asphalt in recent years. This asphalt is now on the market as a paring material in competition with the Trinidad product, and no doubt has had an effect in keeping down the cost of paring and and for paving purposes. Mr. Sutherland has had an effect in keeping down the cost of paring are sense to the sense of successions of the sense of suc

Based and effect the seeping down the cust of the seeping down the seeping down

we other countries, Russia and the United States, ever produced more wheat and only one, the United States, produces more today. Such a variate production of wheat means a correspondingly vast area of fertile soil. If there is to be producing there must be civilization there must be intercommunication there must be intercommunication by means of good roads.

The fertile soil that produces wheat abundantly and permanently permits of the best of roads when the supply of moisture is below normal the same conditions that render the soil productive of wheat the supply of moisture productive of wheat of more than the productive of wheat of the suitability of bituminous sands to the productive of wheat of the suitability of bituminous sands are the stain the world. In wet seasons they are the world. In wet seasons they are the world. The processes of civilization must go forward, whether the seasons are wet or dry. It is

such a magnificent roadway in dry weather will make the announcement. If any certain stateoot and cannot be made to stand up under traffic uent is a fact, then it is a fact whoeve makes it.
during wet weather. Road making material of The point in attaching Mr. Sutherland's name to
some kind other than the native clay, or the black
the condemnatory assertion is that as assistant

The natural conclusion of every re condemnatory phrase would be that McMurray taf sands could not compete in efficiency with in ported asphalt. But the text of the article is specific and definite that the contrary is the fact. The third sentence of the article reads as follows

As early as 1908 sections of concrete walk on Japper avenue, Edmonton, were replaced by an experimental surface prepared from the tar sands. These sections are still to be seen and

The article continues: In 1915 the department of mines, Ottawa In 1915 the department of mines, Ottawa, undertook to demonstrate the value of the material from the bituminous deposits for payment work, and constructed a stretch of roadway on the Fort Saskatchewan Trail within the lety limits. . The foundation of the payment was prepared by the city engineer's department, and consisted of six inches of concrete provided with headers to receive the surfacion material. This bituminous sand payment carried subnrban traffic as well as the heavy trucking from two packing plants. A traffic census taken after the completion of the work showed 666 tons passing over the surface in 16 hours. The pavement has now been laid dow for seven years, and is still in good condition.

he article continues:

"The pavement laid by the department of mines demonstrates that it is possible to prepare a serviceable biturninous surface through the use of the bituminous sands. But it did not answer the question of whether such a surface as he recognized as the only as by the mustomes.

ce An asphalt lake in Trainfad, West material) when used in pavement can and does been the source of supply for the compete successfully with imported asphalt of the asphalt used in paving in both The Sutherland charge against Athabasea tar

manipulation, and cost, all against the tar sand there seems no other conclusion than that crudtar sand for the construction of a surface for city streets cannot compete with imported asphalt."
The statement that asphalt brought rom Trini-

dad or Los Angeles can be used to give cheaps city paving than tar sands from Waterways is on
